

# Methoxy polyethylene glycol-epoetin beta (Mircerca®) Protocol

## **Methoxy polyethylene glycol (PEG)-epoetin beta (Mircerca®)**

ICD-10 code D63.1 – Anemia in chronic kidney disease

**Purpose:** To provide optimal management of ESRD-related anemia in dialysis patients

**Hemoglobin Target Goal:** 10.0-11.0 g/dL

### **Methoxy polyethylene glycol-epoetin beta Dosing:**

Doses are based on estimated dry weight and rounded to the following steps:

| Step | Dose                                     |
|------|------------------------------------------|
| 1    | 30 mcg every <i>four</i> weeks           |
| 2    | 50 mcg every <i>four</i> weeks           |
| 3    | 30 mcg every two weeks                   |
| 4    | 50 mcg every two weeks                   |
| 5    | 60 mcg every two weeks (30 mcg + 30 mcg) |
| 6    | 75 mcg every two weeks                   |
| 7    | 100 mcg every two weeks                  |
| 8    | 150 mcg every two weeks                  |
| 9    | 200 mcg every two weeks                  |

**Table 1**

1. Methoxy polyethylene glycol-epoetin (Mircerca®) will be increased and decreased in 1-step or 2-step increments, based on scale above.
2. Mircerca® will be administered IV to in-center hemodialysis patients, and SQ to home dialysis patients.
3. Mircerca® ceiling is 200 mcg every two weeks (or 3.0 mcg/kg every 2 weeks, whichever is lower). Orders above 200mcg every two weeks require facility medical director or CMO approval.
4. For in-center hemodialysis patients, if pre-dialysis systolic blood pressure is >190 mm Hg, do not administer Mircerca® at the beginning of treatment. If systolic blood pressure falls to <190 mm Hg during hemodialysis, administer Mircerca® during treatment. If Mircerca® is held for the entire hemodialysis session due to persistent systolic blood pressure >190 mm Hg, notify nephrologist and reassess for administration of Mircerca® dose at next hemodialysis session.

### **Initiating Mircerca® for new patients or ESA naïve patients**

For new patients or established patients who have not received an ESA within the last 3 months, initiate as follows:

1. Iron repletion per iron standing orders
2. AND

**Patient Name** \_\_\_\_\_ **NKC#** \_\_\_\_\_

**Northwest Kidney Centers**

## Chronic Maintenance In-Center Standing Orders - Mircera

- a. If Hgb < 10 g/dL, then start Mircera® at 0.6 mcg/kg every 2 weeks, and round down to closest step per Table 1 but no less than 30 mcg every 2 weeks (Step 3).
- b. If Hgb 10.0-10.4 g/dL, then start Mircera® at 30 mcg every 2 weeks (Step 3).
- c. If Hgb ≥ 10.5 g/dL, then do not start Mircera® until Hgb falls to <10.5 g/dL

**Mircera® Dosing Adjustment**

1. Titrate Mircera® per the following table for patients who have a Mircera® order that has not been changed in the last 4 weeks:

| <b>Mircera® Dosing Adjustment</b>                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                           |

| <b>Greater than or equal to 12 g/dL</b>                                                                                                                                                                                                                                                                                                                                                                                                 | Hold Mircera; check Hgb at next redraw for home dialysis patients, and every week for in-center patients. |
| <b>If Hgb is increased or decreased at least 1.0 g/dl since the last Hgb level; recheck Hgb at next dialysis treatment for in-center HD and at next redraw for home patients.</b> Follow the algorithm based on the results of the recheck, e.g., if the value remains the same as the first draw, then follow the algorithm for no change. If redraw indicates a further drop by 1.0 g/dL or greater, contact nephrologist for orders. |                                                                                                           |

**Table 2**

2. **Do not change Mircera® dose more frequently than every 4 weeks EXCEPT:**
  - a. If Hgb falls from above 10 g/dL to less than 10 g/dL, increase dose after 2 weeks.
  - b. If Hgb is already less than 10 g/dL and drops greater than 0.5 g/dL, increase dose after 2 weeks.
  - c. If Hgb ≥ 12 g/dL, hold Mircera® and check Hgb every week for in- center patients, and at next redraw for home dialysis patients. Resume Mircera®

## Chronic Maintenance In-Center Standing Orders - Mircera

with 1-step decrease from previous dose as soon as Hgb is < 11.8 g/dL and last dose was administered 2 weeks ago or more. If dose was at step 1 at time of hold, resume Mircera® at step 1. If Hgb remains ≥ 12 g/dL for more than 2 months, return to regular Hgb testing policy.

3. Post hospitalization: check Hgb at the first treatment after hospitalization and pre-hospitalization dose will be administered if the patient is due for Mircera. Titrate Mircera as needed per Table 2 once Hgb results are received.

**Conversion from Retacrit® or Epogen® to Mircera®**

1. When a patient with an Retacrit® or Epogen® order switches to Mircera®, discontinue erythropoietin order.
2. Convert Retacrit® or Epogen® to appropriate dose of Mircera®, per conversion dose chart below. Convert to Mircera® when the next ESA dose is due.
3. If ESA is on HOLD from another protocol, wait until Hgb is less than 11.8g/dl, then convert ESA as follows: See Table 3 to convert previous ESA dosing to Mircera® Step, then see Table 1 and decrease 1 Step.
